Project Title

Personal Portfolio Website

Introduction

The Personal Portfolio Website is a single-page web application developed to showcase personal profile information, technical skills, and contact details. The project is designed using HTML and CSS with a clean code.

Objective

The main objective of this project is to create a professional portfolio website using HTML and CSS skills through practical implementation.

Technologies Used

The project is developed using HTML5 for creating the structure of the web pages and CSS3 for styling and layout design.

Features

The website contains multiple sections such as Header, About me, Skills and Contact Information. It has a clean user interface with proper spacing and alignment for better readability.

Working

When the website loads, the header section displays the user's name and professional title. The About Me section provides a brief introduction about the developer and technical background. The Skills section lists programming languages and technologies known by the user. The Contact section displays email and phone information for communication purposes.

Advantages

1. The project helps showcase personal and technical skills professionally on a single webpage.
2. It improves front-end web development knowledge and practical coding experience.

Conclusion

The Personal Portfolio Website project was successfully developed using HTML and CSS technologies.
